RNA & Disease

Postdoc position to investigate composition and function of human hnRNP complexes

The Mühlemann laboratory at the University of Bern, Switzerland (<https://muehlemann.dcbp.unibe.ch/>), which is associated with the Swiss national research center for RNA & Disease (<https://www.nccr-rna-and-disease.ch>), has an opening for a postdoctoral fellow. The position is fully funded for 2 years by a collaborative research grant shared with the [Blencowe](#), [Allain](#) and [Novacek](#) labs and has the potential to be extended. Starting date is April 1, 2022, or upon mutual agreement.

Candidates must have a PhD in molecular biology or biochemistry and a sound practical and theoretical background in RNA biology.

If you...

- are a highly skilled biochemist who enjoys purifying protein complexes from cells
- love the analysis of large data sets
- are excited to participate in the collaborative quest of elucidating the structure and functions of a recently re-discovered hnRNP complex termed the ribonucleosome in human cells
- are an ambitious, top motivated, rigorous scientist used to working and thinking independently
- have ample social skills, like to work in a team and help junior scientists

...then you are the person we are looking for.

We offer a scientifically stimulating, international, team-oriented working environment, access to state of the art technology and lots of exciting research.

Applications should be submitted electronically as a single PDF, consisting of a motivation letter, your CV and publication list, and the coordinates of three academic references, to oliver.muehlemann@unibe.ch until February 25, 2022. Additional information can be obtained from Oliver Mühlemann.
